Faunistic, new records, Coleoptera, Endomychidae, Merophysiinae, *Holoparamecus*, Baltic amber, Poland

**Abstract.** The species *Holoparamecus (Blumenus) hoffeinsorum* Reike & Alekseev in Reike, Alekseev, Gröhn, Artl & Manke, 2020 is newly recorded from Baltic amber, Poland.

### **Coleoptera: Endomychidae: Merophysiidae**

***Holoparamecus (Blumenus) hoffeinsorum* Reike & Alekseev in Reike, Alekseev, Gröhn, Artl & Manke, 2020.** Poland, Baltic amber piece, Gdansk, wyspa Sobieszewska, 1 spec., J. Háva det., author's collection. Complete beetle is included in transparent amber piece. Syninclusions consist of numerous small to minute organic particles. The species is described from Bitterfeld amber and Baltic amber of Yantarny settlement (formerly Palmnicken) in Sambian (Samland) Peninsula of the Kaliningrad region (Russia) (Reike et al. 2020). New to Poland.

ACKNOWLEDGEMENTS. I very indebted to Miloslav Rakovič (Czech Republic) for revision of the English text and to Vitalii Alekseev (Latvia) for valuable comments.
